

To Whom It May Concern,

All STEELER, Inc. steel framing products are manufactured at our Seattle, WA (98178) and Newark, CA (94560) manufacturing facilities. The manufacturing facility closest to your jobsite will be the location manufacturing your order.

The steel coils we use to manufacture come from Kalama, WA (98625) for the Seattle facility and Pittsburgh, CA (94565) for the Newark facility. Please feel free to contact us directly if you would like more information about the steel provided for your project. The following demonstrates our two production facilities and their local coil sources, with a rough estimate of a 500 mile radius around each production plant:

Best,

● = Steeler Manufacturing Facility  
● = Local Coil Source
